TITLE OF INVENTION: Rice Nucleic Acid Molecules and Other Molecules Associated
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE REFERENCE: 38-21(53221)B
CURRENT APPLICATION NUMBER: US/10/437,963
CURRENT FILING DATE: 2003-05-14
NUMBER OF SEQ ID NOS: 204966
SEQ ID NO 3537
LENGTH: 3023
TYPE: DNA
ORGANISM: Oryza sativa

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq length: 0

a representative of each contig, which were reracked to form library Gm-r1070. The cDNA clones of the reracked Gm-r1070 library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://www.bc.umm.edu/ResearchProjects/Soybean/index.html. Reracking was performed by Genome Systems, St. Louis, http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics, University of Illinois, http://www.life.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Gm-r1070 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     H. A., Director, Keck Center for Comparative and Functional
                                                                                                                                                                                                                                                                                                                                                            from young leaves or hypocotyls exposed to bacterial and fungal pathogens (source libraries Gm-c1072, Gm-c1073, Gm-c1074) and G63 from roots of young plants grown in hydroponic media without phosphate (source library Gm-c1087). The 5' RSTs of the source clones from the different libraries were used to select singletons, or a representative of each contig, which were reracked to form library Gm-r1089 and the cDNA clones of the reracked Gm-r1089 library were then sequenced at the 3' end. The unigene selection and 3' sequencing was funded by NSF plant Genome project #9872555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            from germinating cotyledons(source library Gm-c1069, Gm-c1076, and Gm-c1077); 1.465 cDNAs from various tissue and organ systems of the adult plant; 476 cDNAs from adult stem tissue (source library Gm-c1062); 1340 cDNAs from tissue culture derived somatic embryos (source libraries Gm-c1036 and Gm-c1075); 2918 cDNAs from hypocotyls or young seedlings; 742 cDNAs from germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-c1065, Gm-c1066, and Gm-c1068); 839 cDNAs from control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control of the process of the control 
(http://soybeangenomics.cropsci.uiuc.edu/) as part of creation of a low redundancy soybean cDNA set. The source cDNA libraries were constructed by the laboratories of Lila Vodkin, University of the Northern Arizona State University, and Paul Keim, Northern Arizona University as part of the Public EST project, http://129.186.26.94/soybeanest.html. The contig analysis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 different cDNA libraries constructed from various tissues and stages of development of soybean including 973 cDNAs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /clone="Gm-r1089-2405"

corresponding 5' EST from each clone in the Gm-r1089 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the clone ID of the original cDNA library that is also listed under 'OTHER EST'." sequencing were conducted by services of the University of Illinois Keck Center for Comparative and Functional Genomics http://www.biotech.uiuc.edu/keck.htm. Note: The to select unique genes was performed by the laboratory Ernest Retzel. Center for Computational Genomics and Bioinformatics, University of Minnesota, http://web.ahc.umn.edu/biodata/nsfsoy/.                                                                                                                                                                                                                                                                                   /note="Vector: pSPORT1; Bite 1: Sal1; Site 2: Not1; This cDNA library was constructed from mRNA isolated from immature cotyledons of greenhouse grown plants (individual seed fresh weight of 100-300mg). The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complementary DNA was synthesized from mRNA using a poly(dT) sequence with a NotI restriction site. Ball linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-SalI restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into be coli ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note that Gm-r1030 is a re-rack of Gm-c1007."
